

AMENDMENTS TO THE SPECIFICATION

Please amend the Abstract as follows:

A light-diffusing sheet ~~of the present invention comprises~~ includes a transparent film and a light-diffusing layer, ~~which is made of a resin coating layer having a minute unevenness formed on a surface thereof,~~ is formed on at least one side of the transparent film. The transparent film ~~includes~~ contains a thermoplastic resin (A) having a substituted and/or non-substituted imido group in a side chain, and a thermoplastic resin (B) having a substituted and/or non-substituted phenyl group and nitrile group in a side chain, and the surface with the minute unevenness ~~satisfies~~ has an average height-depth spacing (S_m): $S_m \leq 80 \mu\text{m}$, a center-line average surface roughness (R_a): $R_a \leq 0.25 \mu\text{m}$ and a ten-point average surface roughness (R_z): $R_z \leq 9R_a$. ~~The light-diffusing sheet, even in a case of application to a high definition LCD, is suppressing a screen glittering phenomenon while maintaining antiglareness, exhibiting almost no birefringence, and excellent in adhesion and durability.~~
